Description: This traffic impact study has been prepared for a proposed athletic master plan at the Hudson High School site located in the City of Hudson, Summit County, Ohio. The high school site is triangular shaped with Stow Road to the east, the Ohio Turnpike (I-80) to the south, and Hudson Aurora Road to the east.

The full development of the site is expected to consist of facilities for softball, baseball, soccer, gymnastics, football, wrestling, tennis, field hockey, as well as additional support facilities and parking. There are currently 775 existing parking spaces at the site. The full development of the additional facilities is expected to add an additional 561 parking spaces. The development of the athletic facilities is expected to use the existing access drives along Hudson Aurora Road and Stow Road.

Based upon the results of the analysis in this study, it is our opinion that with the use of police personnel to control and manage site traffic, the development traffic can be accommodated without impacting the area roadway network.
